Asterand Raises Series “C” Financing
PR Newswire -- November 21, 2003

Asterand, Inc., the Detroit based human tissue research bank, announced that it has closed a Series “C” funding with the help of two Michigan based venture capital funds. New investors Apjohn Ventures of Kalamazoo Arboretum Ventures of Ann Arbor and Chrysalis Ventures of Louisville, KY, joined existing investors Oxford Bioscience Partners of Boston, which led both the company’s Series “A” and Series “B” rounds, and Fort Washington Capital Partners of Cincinnati.

“October is breast cancer awareness month,” said Randal Charlton, Asterand’s CEO. “So this is a good time to recognize that women of the last century are helping the women of this century find a cure and become free from a major health problem.” Asterand, Inc., the Detroit based human tissue research bank, announced that it has closed a Series “C” funding with the help of two Michigan based venture capital funds. New investors Apjohn Ventures of Kalamazoo Arboretum Ventures of Ann Arbor and Chrysalis Ventures of Louisville, KY, joined existing investors Oxford Bioscience Partners of Boston, which led both the company’s Series “A” and Series “B” rounds, and Fort Washington Capital Partners of Cincinnati.

Asterand’s customers include researchers at some of the world's foremost and oldest genomics, pharmaceutical and biotech companies. The company also has established partnerships with a diverse group of hospitals and medical institutions around the world to provide human tissue samples with specific disease states for research purposes. According to Randal Charlton, founder and CEO of Asterand, “This financing has demonstrated the value of the emerging Michigan based venture capital community. The managing partners of Arboretum and Apjohn played crucial roles in helping to attract new investment from outside the state. We now have broad support from the Midwestern financial community with investors from Kentucky, Ohio and Michigan as well as our long time support from the East Coast investment fund Oxford. The infusion of capital will help us reach our goal of becoming the most important tissue bank for genomic and proteomic research in the world. The funds will be used to further develop our network of collaborating hospitals and to increase the research services we are able to offer the world’s leading drug discovery companies.”

“Asterand is an exciting investment because it is providing a service which is at the core of a great deal of genomics and proteomics,” says Tim Petersen a Managing Partner at Arboretum Ventures. Mina Sooch the managing partner of Kalamazoo based Apjohn Ventures adds, “The company’s progress to date, both in customer sales and in building its biorepository and supply network, illustrates not only the market demand but the management team’s ability to serve it. We view Asterand as a critical player in building a vibrant early stage life sciences industry in Michigan and the Midwest.”

About Asterand: Founded in early 2000, Asterand operates one of the world’s largest tissue banks for genomic and proteomic research. The company collects material from a
worldwide network of donor sites and has an extensive collection of material and data covering over 150 major disease targets. This includes many types of cancer, cardiovascular disease, rheumatoid arthritis and CNS targets such as Alzheimer’s and bipolar disease.
